1、射胶部件采用双缸平衡设计，射胶压力更高，结构简单稳定。设计空间更短。故障率低。

1. Injection unit adopts double-cylinder design, more higher injection pressure, more simpler structure and lower malfunction rate.

2、加大射移油缸，大型机采用双射移油缸结构，有效的防止射嘴在机器高速运转下，由于机器震动等原因而产生漏胶现象。

2. Enlarged-cylinder, adopting two-cylinder design, effectively prevent the adhesive-material leaking phenomenon caused by the machine vibration or other reasons while the nozzle is under high-speed operation.

3、射胶导套采用石墨衬套，提高衬套耐磨性能，减少对衬套添加润滑频率，有效改善注射部件的清洁度。

3. Adopting graphite bush, improving the wear-resistance, reducing the frequency of using lubrication oil, effectively improve the cleanliness of the injection part.

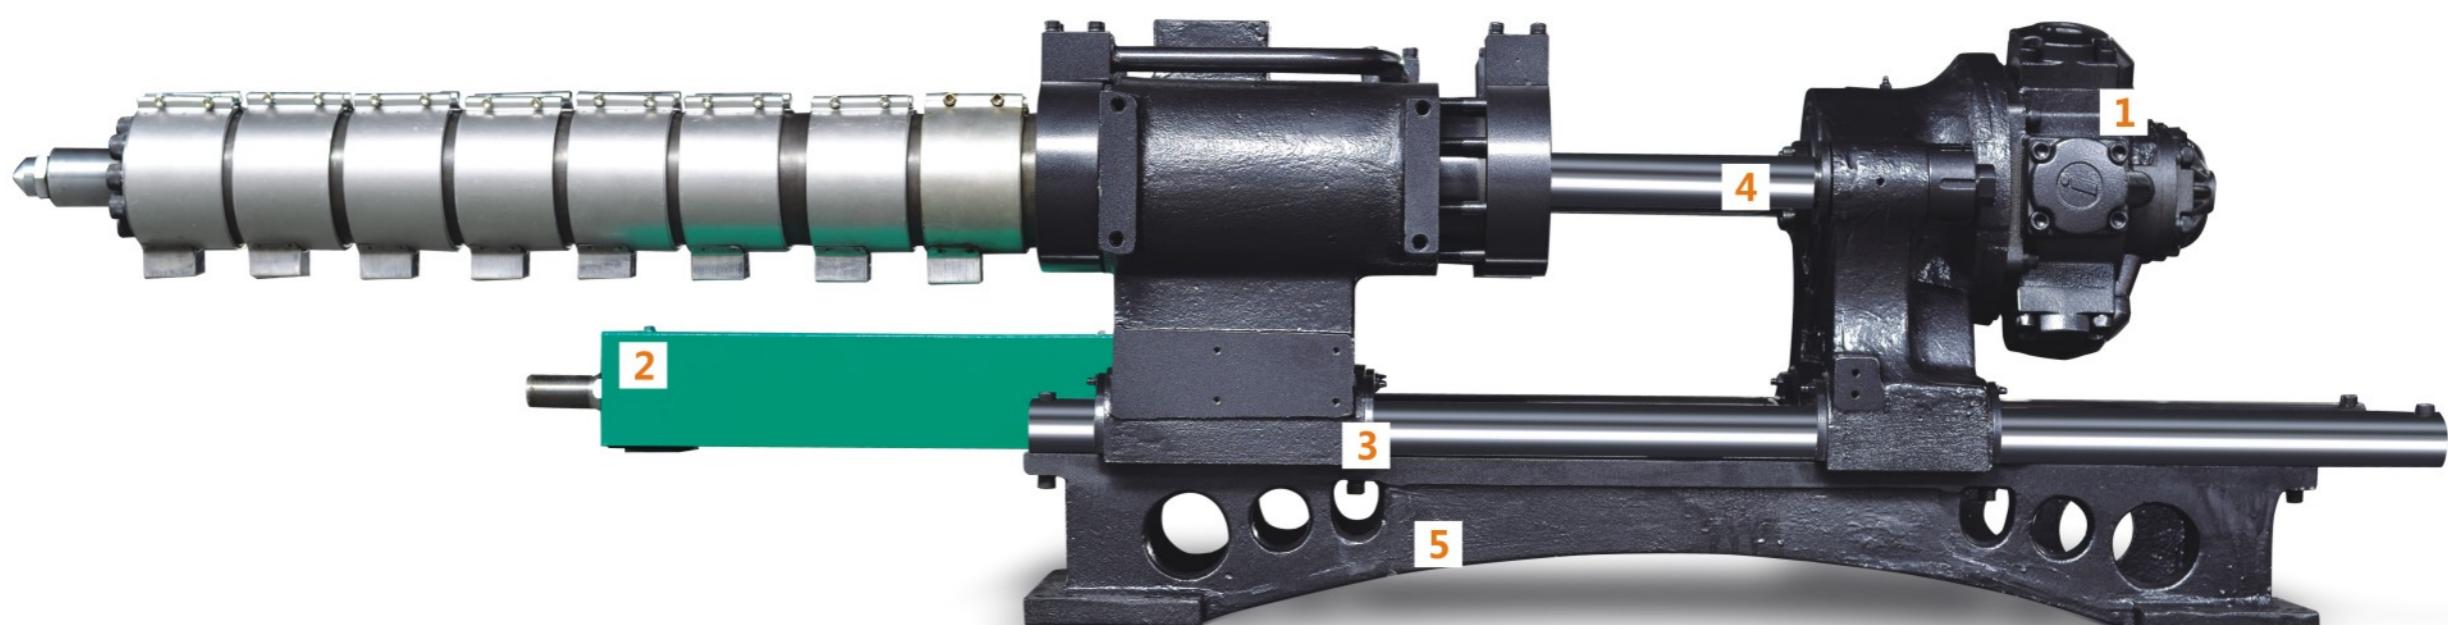

4、射胶油缸和射缸油缸采用低摩擦密封，提高注射响应速率及复杂工艺情况下提高射胶稳定性。

4. Injection cylinder adopts low-frictional seals, improving the response rate and improve the stability under the complicated processes of injection.

5、桥式射台座整体设计，适用于不同长径比的塑化部件。

5. Bridge-style design, for different L/D ratio plasticizing parts.

省电

Energy Saving

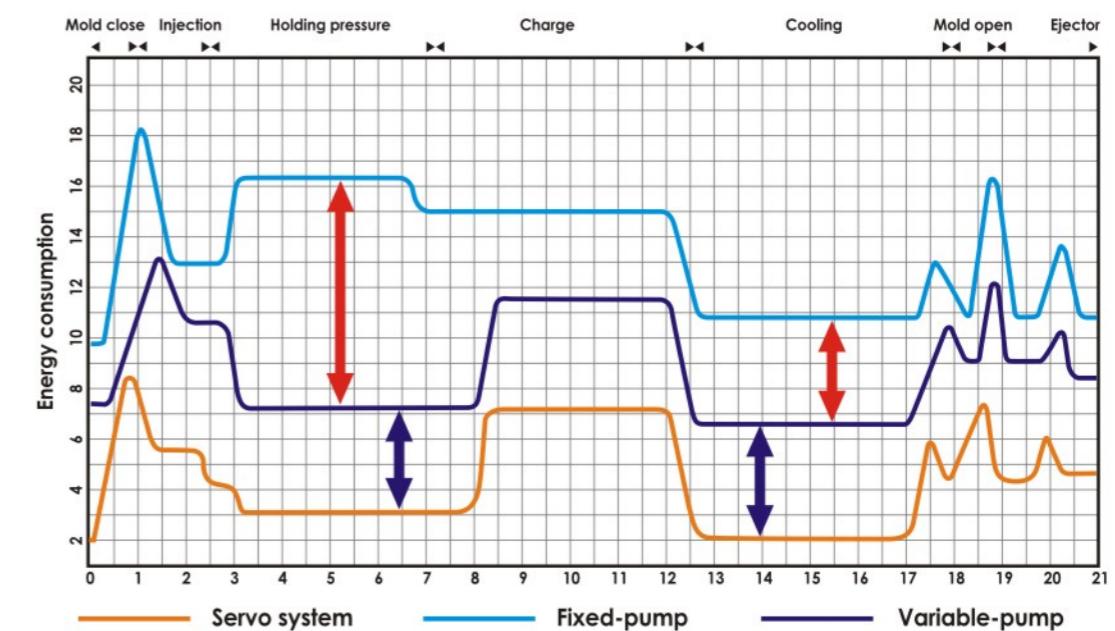

同等工作量的情况下，耗电量比普通定量泵省30%-70%。

As compared with fixed-pump system,
it saves power by 30%-70%.

VDP Pump

High efficiency, energy-saving and high precise proportional pressure and flow variable displacement pump system make the out of the hydraulic system matching the required power for entire machine operation without loss of high pressure throttle and overflow energy. As compared with fixed pump, it saves power by 30%~60%. A motor with same power may be fitted with an oil pump of bigger displacement and thus accelerates the speed of machine. Besides, the low oil temperature will prolong the service life of sealing elements.
